PROJECTS

Google Engine Clone (<https://google-engine.netlify.app>)

- ▣ **Tech-used:-** React, React-hooks, React-Router-Dom, React-icons, Context API, googleapis, axios
- ▣ I have successfully finished the Google-Engine-Clone using React.js and thought the journey while creating this project I learn how to use context api and how to play with googleapis.
- ▣ **Source Code:-** https://github.com/Kritika131/search_engine
- ▣ **Deployed on:-** <https://google-engine.netlify.app>

Cinemax (<https://master--cinemax-site.netlify.app/>)

- ▣ **Tech-used:-** React js, redux, redux-toolkit, sass, axios, tmdb api
- ▣ While create this project I learn how to work with redux-toolkit and many more libraries such as react-player, react-icons, day js, react-lazy-load-image-component, etc. I also explore sass to create this application.
- ▣ **Source Code:-** <https://github.com/Kritika131/cinemax>
- ▣ **Deployed on:-** <https://master--cinemax-site.netlify.app/>

Youtube-clone (<https://you-tube-clone-bice.vercel.app/>)

- ▣ **Tech-used:-** React JS, ReactRouter ContextAPI, tailwind CSS, rapid-api
- ▣ Successfully created this Youtube-Clone app, powered by react js, integrated with the youtube rapid-api and designed with the elegance of Tailwind CSS. While creating this clone using tailwind css, I feel that writing css is much easier than writing it from scratch.
